

1. Numeric.py (20 Points)

Write a program that prompts the user to enter a number between the range of 1 through 10. The program should display the Roman Numeral version of that number. If the number is outside the range of 1 through 10, the program should display the error message. The output should display the data in table as shown below:

Hints:

Prompt user to enter a number.

Use a 'if/elif' to verify if the number entered is within the range and display output accordingly. If the number is out of range, display the following error message: "Error: Invalid Number."

Output should look like:

Number	Roman Numeral
1	I
2	II
3	III
4	IV
5	V
6	VI
7	VII
8	VIII
9	IX
10	X
